RE: Pre-Demolition Survey Reports (PDSRs) for Building 771 Area AE & AH West - Approval

Dear Mr. Legare:

The Colorado Department of Public Health and Environment, Hazardous Materials and Waste Management Division has reviewed the PDSRs for Building 771 Area AE (Revision 1 dated August 31, 2004), and Area AH West (Revision 1, dated August 31, 2004). These PDSRs were received on September 13, 2004. Although these PDSRs are not the usual PDSRs provided for our approval (with contaminated and free-release areas interspersed), based on the information contained in these PDSRs, our understanding of the special circumstances related to the decontamination efforts associated with B771, the ultimate removal of the remaining contamination that exists within Areas AE & AH West and allowing recycling of as much of the concrete that meets the free-release criteria as possible, as well as inherent difficulties with performing these PDSs to appropriate PDSP requirements, we are hereby approving the PDSRs for Building 771 Areas AE & AH West.

These PDSRs identify areas of B771 Area AE & AH West that meet the unrestricted release criteria allowing the concrete to be recycled in those areas. However, as stated in these PDSRs, contamination remains in Area AE & AH West within 6 feet of final grade that must and will be removed. We expect that, as stated, all of the contamination will be properly identified, protected, segregated, controlled, and removed, and none will be left or incorporated into the recycled concrete (free-releasable) rubble that will be left on site. The actions performed and data generated necessary to achieve and document this complete contamination removal must be properly described and provided in the Closeout Report.

All demolition activities and related issues are expected to be discussed and resolved utilizing the consultative process.
